MMR_0198 Ronald L. King

Erie Railroad – NCR Division 6: **Ron King is associated with the Erie Railroad in the NMRA (National Model Railroad Association) North Central Region (NCR) Division 6. He has been involved in various projects and clinics related to model railroading.**

Set on the Erie in October 1953, Ron King, MMR, began the layout in 1963. Current scenery was started in 1982. All the towns are named after real towns. Many of the buildings are scratch built, most of the others are kitbashed to varying degrees.

Ron built the Akron station platform using three pipes to shape the double curved roof shape, styrene sheets being clamped against the pipes and heated in the oven to form. The control panels use magnets to keep them closed so no screws show on the outside with the interiors still easily accessible.

The following roads are modeled on the layout: Erie, Susquehanna, B&O, and Alleghany & Eastern, with Pennsylvania, Lehigh & New England and Western Maryland making appearances as well.
